

## Managed detection across products

Maximize your security stack through true managed cross-product detection and response

**23**  
minute  
mean time  
to respond

### YOUR CHALLENGE

**As your security challenges grow, so does your tech stack.**

You add more products, across more attack surfaces, to address those challenges. **But adding more technology creates silos—making it difficult to gain unified visibility across your entire environment.** Threats hide in these silos, making them challenging for your security operations center (SOC) to detect and leaving you vulnerable to advanced threats.

You have all the right technology in place, but you're missing out on the potential ROI of the combined value from your products working together. Meanwhile, your SOC suffers from alert fatigue from triaging too many alerts without context and continuously tuning detections. This makes it nearly impossible to stay ahead of adversaries while still unlocking insights from the full breadth of your security telemetry.

Managed detection and response (MDR) services can help, but they typically focus on the endpoint or SIEM, missing opportunities to improve ROI and deliver real-time, cross-product insights and remediation throughout your tech stack, including cloud, Kubernetes, identity and SaaS.

### HOW WE HELP

**Expel combines world-class security practitioners and a purpose built, AI-driven platform to facilitate managed, cross-product detection and response.**

Our protection spans the widest breadth of attack surfaces—a claim that many vendors make, but can't back up.

We provide the complete story of what's happening across your environment and deliver cyber resilience recommendations to further optimize. Expel's technology and 24/7/365 SOC ensure you get the most from every part of your security investment.

We use industry-leading AI and automation to power our service and accelerate our SOC to make fast and precise decisions that close your security coverage gaps. We deliver net-new detection coverage, a reduction of false-positive alerts, correlation, and automated response across the most vendors and attack surfaces—**with an MTTR of only 23 minutes.**

We also easily integrate and evolve with your unique tech stack—and help you get new tech onboarded quickly—so you can improve ROI with the products you already invested in. With Expel, you can see the full picture and get the most value out of all your tech.

## WHY EXPEL

At Expel, we're the industry-leader in MDR. Here's why we're different:

### Seamless onboarding and configuration

Onboarding flexibility ensures immediate value. Customers can either onboard almost completely independently or take advantage of our full-concierge onboarding.

### World class detection and threat intelligence

With our breadth of integrations and cross-correlation of events, we show you the most complete story of what's happening across your environment so that you can maximize ROI from every component of your tech stack.

### Unrivaled visibility, context, and personalization

We continuously create detections based on what we learn from new insights, and customers can make rules based on their needs and what they see in Expel Workbench™, so you continue to get more value from your existing security investments.

### Industry leading protection

Our technology-powered MDR delivers better outcomes as you grow. The more you integrate into Workbench, the more intelligent the platform becomes, continuously improving accuracy and your ROI.

### Proactive risk, resilience, and posture analysis

We provide resilience recommendations with every investigation, along with full access to our Resilience Library, to help you shift from reactive to proactive and make the most of your signal.

## WHAT OUR CUSTOMERS SAY

“We often think about our detection philosophy. Any MDR company can set up in a SOC, tap into other technologies, and pass over alerts.

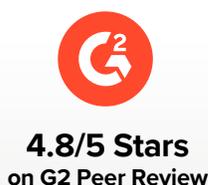

**What separates Expel is that they're the layer between us and our tools that gives us critical context.**

Expel is playing chess while the others are playing checkers.
