

Strengthen your SecOps program

World-class MDR to augment your people, processes, and technology with 100% transparency

YOUR CHALLENGE

Every day it gets harder for your security team to keep your organization secure.

With constantly expanding attack surfaces and evolving threats across your cloud infrastructure, endpoint, Kubernetes, network, SIEM, SaaS, email and identity environments, it's impossible to keep up. Investing in more security technology only leaves your team drowning in additional alerts without context, triaging false positives, and lacking the decision support they need to act fast.

Managed security partners can help, but are often a black box—providing no visibility into what they do in your environment, or whether you're actually secure. This leads to an erosion of trust and control, minimizing the amount of time your team can spend doing the strategic work that builds cyber resilience.

With a lack of transparency and collaboration, you're unable to identify inefficiencies and cost-saving opportunities, scale your current workstreams, augment your existing technology stack, or get the security expertise needed to strengthen your in-house team.

HOW WE HELP

Expel provides world-class, 24/7/365 coverage and visibility across your tech stack, so that you can augment and level-up your security operations.

With Expel, your team benefits from a close partnership with our security operations center (SOC) experts and world-class automation and AI. Together, these elements strengthen detection and response in your environment, so you can improve your security resilience.

We augment your alerts with **Expel-written detections aligned to the MITRE ATT&CK® framework** to round out your MITRE coverage, improve accuracy, and free your team from the burden of false positives and low fidelity alerts. You get guidance on how to reduce risk, save money, and improve efficiency, along with root cause analysis for every incident and resilience recommendations for future improvements.

Expel provides 100% visibility into what our people are working on in your environment. Your team can maximize your existing tech investments, while learning how to strengthen your program.

WHY EXPEL

At Expel, we're committed to strengthening your SecOps program to improve your security maturity. Here's how we do it:

Seamless onboarding and configuration

Our human-led, tech assisted, approach to onboarding means working with a key point of contact on the Expel team, coupled with an intuitive onboarding wizard to rapidly level-up your program.

World class detection and threat intelligence

We improve your cyber resilience with AI-powered detections tailored to your specific technology. Our detections are continuously optimized, aligned to MITRE ATT&CK®, and balanced between net-new coverage, false positive reduction, and severity analysis.

Unrivaled visibility, context, and personalization

We provide complete transparency into what our people and tech are working on, so you can trust in Expel while maintaining control of your security operations, and learn from our SOC experts along the way.

Industry leading protection

With industry-leading metrics across mean-time-to-detect, triage, and response, Expel strengthens your SecOps program. And 24/7 access to our experts means your team is always in the loop on exactly what's happening in your environment.

Proactive risk, resilience, and posture analysis

We continuously learn from data ingested into our security operations platform, Expel Workbench™, to improve how we augment your tech. We also share resilience recommendations for minimizing risk and exposure to potential threats with your team.

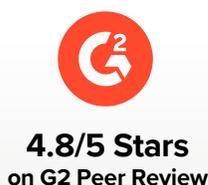

WHAT OUR CUSTOMERS SAY

“Expel is a natural extension of our team. **The analysts watching our environment truly know us.** This means I can align my internal team members to focus on the many other security initiatives that are critical to the success of The Economist Group.”
